#### Function K: Delay On De-energization without Auxillary Supply

#### Description

On energisation of power supply, the output(s) R close(s). On de-energisation of power supply, timing period T starts and at the end of this period, the output(s) R revert(s) to its/their initial state. The energization of power supply > Tk is necessary to sustain the timing period T.

#### Function: 1 Output

Tk > 80ms

#### Function: 2 Outputs

Tk > 80ms

#### Function He: Pulse-on De-energization

#### Description

After energisation of power supply > 80ms followed by deenergization of power supply, the output(s) R closes() for the duration of a timing period T then revert(s) to its/their initial state. Energisation of power supply < 80ms followed by deenergization of power supply, the output(s) R close(s) and WILL NOT ABLE TO sustain for the duration of a timing period T before revert(s) to its/their initial state.
