ATV630U07M3
variable speed drive ATV630 - 0.75kW/1HP - 200...240V - IP21/UL type 1

Main
Range of product
Altivar Process AT600

Product or component type
Variable speed drive

Product specific application
Process and utilities

Device short name
ATV630

Variant
Standard version

Product destination
Asynchronous motors
Synchronous motors

Mounting mode
Wall mount

EMC filter
Without EMC filter

IP degree of protection
IP21 conforming to IEC 61800-5-1
IP21 conforming to IEC 60529

Degree of protection
UL type 1 conforming to UL 508C

Type of cooling
Forced convection

Supply frequency
50...60 Hz - 5...5%

Network number of phases
3 phases

[Us] rated supply voltage
200...240 V - 15...10%

Motor power kW
0.75 kW (normal duty)
0.37 kW (heavy duty)

Motor power hp
1 hp normal duty
0.5 hp heavy duty

Line current
3 A at 200 V (normal duty)
2.6 A at 240 V (normal duty)
1.7 A at 200 V (heavy duty)
1.5 A at 240 V (heavy duty)

Prospective line Isc
50 kA

Apparent power
1.1 kVA at 240 V (normal duty)
0.6 kVA at 240 V (heavy duty)

Continuous output current
4.6 A at 4 kHz for normal duty
3.3 A at 4 kHz for heavy duty

Maximum transient current
5.1 A during 60 s (normal duty)
5 A during 60 s (heavy duty)

Disclaimer: This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications.
| **Asynchronous motor control profile** | Variable torque standard

|                                       | Communication module, BACnet MS/TP  
|                                       | Communication module, Ethernet Powerlink  

**Complementary**

| **Output voltage** | <= power supply voltage  
| **Permissible temporary current boost** | 1.1 x In during 60 s (normal duty)  
|                                       | 1.5 x In during 60 s (heavy duty)  
| **Motor slip compensation** | Automatic whatever the load  
|                                | Can be suppressed  
|                                | Adjustable  
|                                | Not available in permanent magnet motor law  
| **Acceleration and deceleration ramps** | Linear adjustable separately from 0.01…9999 s  
| **Braking to standstill** | By DC injection  
| **Protection type** | Thermal protection: motor  
|                    | Safe torque off: motor  
|                    | Motor phase break: motor  
|                    | Thermal protection: drive  
|                    | Safe torque off: drive  
|                    | Overheating: drive  
|                    | Overcurrent between output phases and earth: drive  
|                    | Overload of output voltage: drive  
|                    | Short-circuit protection: drive  
|                    | Motor phase break: drive  
|                    | Overvoltages on the DC bus: drive  
|                    | Line supply overvoltage: drive  
|                    | Line supply undervoltage: drive  
|                    | Line supply phase loss: drive  
|                    | Overspeed: drive  
|                    | Break on the control circuit: drive  
| **Frequency resolution** | Display unit: 0.1 Hz  
|                        | Analog input: 0.012/50 Hz  
| **Electrical connection** | Control: removable screw terminals0.5…1.5 mm²/AWG 20…AWG 16  
|                        | Motor: screw terminals 2.5…6 mm²/AWG 14…AWG 10  
|                        | Line side: screw terminals 2.5…6 mm²/AWG 14…AWG 10  
| **Connector type** | RJ45 (on the remote graphic terminal) for Ethernet/Modbus TCP  
|                        | RJ45 (on the remote graphic terminal) for Modbus serial  
| **Physical interface** | 2-wire RS 485 for Modbus serial  
| **Transmission frame** | RTU for Modbus serial  
| **Transmission rate** | 10/100 Mbit/s for Ethernet IP/Modbus TCP  
|                        | 4.8, 9.6, 19.2, 38.4 kbit/s for Modbus serial

R3A, R3CSequence relay

Sensor Connection
It is possible to connect either 1 or 3 sensors on terminals AI2 or AI3.
Sink / Source Switch Configuration

The switch is used to adapt the operation of the logic inputs to the technology of the programmable controller outputs.

- Set the switch to Source (factory setting) if using PLC outputs with PNP transistors.
- Set the switch to Ext if using PLC outputs with NPN transistors.

Switch Set to SRC (Source) Position Using the Output Power Supply for the Digital Inputs

Switch Set to SRC (Source) Position and Use of an External Power Supply for the DIs

Switch Set to SK (Sink) Position Using the Output Power Supply for the Digital Inputs

Switch Set to EXT Position Using an External Power Supply for the DIs
Derating Curves

[Graph showing derating curves for different temperatures and frequencies]
