### RE22R1MYMR

**Multi-function Timing Relay - 0.05s…300h - 24…240V AC/DC - 1C/O**

#### Main

- **Range of product**: Zelio Time
- **Product or component type**: Modular timing relay
- **Discrete output type**: Relay
- **Device short name**: RE22
- **Nominal output current**: 8 A

#### Complementary

- **Contacts type and composition**: 1 C/O timed contact, cadmium free
- **Time delay type**: Dw, Ac, C, Dit, Ht, D, A, Di, Hw, W, Ct, Act, At, Wt, H, Dt, Dw, Aw

#### Time delay range

- 30…300 s
- 10…100 s
- 3…30 s
- 30…300 min
- 3…30 min
- 0.3…3 s
- 0.05…1 s
- 30…300 h
- 1…10 s

Wiring Diagram
Function A: Power On-Delay

Description
On energisation of power supply, the timing period T starts. After timing, the output(s) R close(s). The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

Function: 2 Outputs
Function: 1 Output

Function: 2 Outputs

Description
After energisation of power supply and energization of Y1 causes the timing period T to start.
At the end of this timing period, the output(s) R close(s).
When deenergization of Y1, the timing T starts.
At the end of this timing period T, the output(s) R revert(s) to its/their initial position.
The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").
Function Act: On-Delay & Off-Delay with Control Signal & With Pause / Summation Control

Description
After energisation of power supply and energization of Y1 causes the timing period T to start and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R close(s). When deenergization of Y1, the timing T starts and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R revert(s) to its/their initial position. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

\[ T = t_1 + t_2 + \ldots \]
\[ T = t'_1 + t'_2 + \ldots \]

Function: 2 Outputs

\[ T = t_1 + t_2 + \ldots \]
\[ T = t'_1 + t'_2 + \ldots \]
Function At: Power On-Delay with Pause / Summation Control

Description

On energisation of power supply, the timing period T starts. Timing can be interrupted / paused each time X1 energizes. Except for RE17*, RE22R2AMU, RE22R2MMW, RE22R2MMU, RE22R2MJU, timing can be interrupted / paused each time Y1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R close(s). The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output with Pause / Summation Control

\[ T = t_1 + t_2 + \ldots \]

Function: 2 Outputs with Pause / Summation Control

\[ T = t_1 + t_2 + \ldots \]

Function: 1 Output with Retrigger / Restart Control

\[ T = t_1 + t_2 + \ldots \]

Function: 2 Outputs with Retrigger / Restart Control

\[ T = t_1 + t_2 + \ldots \]
**Function Aw : Power On-Delay With Retrigger / Restart Control**

**Description**

On energisation of power supply, the timing period T starts. At the end of the timing period T, the output(s) R close(s). Energization of Y1 makes the output(s) R open(s). Deenergization of Y1 restarts timing period T. At the end of timing period T, the output(s) R close(s). The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST")

**Function: 1 Output**

![Diagram of Function: 1 Output]

**Function: 2 Outputs**

Function C: Off-Delay Relay with Control Signal

Description
After energization of power supply and energization of Y1 causes output(s) R close(s). When Y1 deenergizes, timing T starts. At the end of this timing period T, the output(s) R revert(s) to its/their initial position. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

Function: 2 Outputs
Function Ct: Off-Delay Relay with Control Signal & With Pause / Summation Control

Description
After energisation of power supply and energization of Y1 cause output(s) R close(s). When Y1 deenergizes, timing starts and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R revert(s) to its/their initial state. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

\[ T = t_1 + t_2 + \ldots \]

Function: 2 Outputs

\[ T = t_1 + t_2 + \ldots \]
Function D: Symmetrical Flashing Relay (Starting Pulse Off)

Description
On energisation of power supply, output(s) R starts at its/their initial state for timing duration T then change(s) to output(s) R close(s) for the same timing duration T. This cycle is repeated indefinitely until power supply removal. Specially for RE17*, RE22R2AMU, RE22R2MMW, RE22R2MMU, RE22R2MJU, this D function can only be initiated by energizing Y1 permanently. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

Function: 2 Outputs

Function: 1 Output with Retrigger / Restart Control

Function: 2 Output with Retrigger / Restart Control
Function Dt: Symmetrical Flashing Relay (Starting Pulse Off) & With Pause / Summation Control

Description
On energisation of power supply, output(s) R starts at its/their initial state for timing duration T and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, then changes to output(s) R close(s). The output(s) R close state will remain for the same timing duration T and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R revert(s) to its/their initial state. This cycle is repeated indefinitely until power supply removal. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

\[ T = t_1 + t_2 + \ldots \]
\[ T = t'_1 + t'_2 + \ldots \]

Function: 2 Outputs

\[ T = t_1 + t_2 + \ldots \]
\[ T = t'_1 + t'_2 + \ldots \]
Function DW: Symmetrical Flashing Relay (Starting Pulse Off) & With Retrigger / Restart Control

Description
On energisation of power supply, output(s) R starts at its/their initial state for timing duration T then change(s) to output(s) R close(s) for the same timing duration T. This cycle is repeated indefinitely until power supply removal. Specially for RE17*, RE22R2AMU, RE22R2MMW, RE22R2MMU, RE22R2MJU, this D function can only be initiated by energizing Y1 permanently. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

Function: 2 Outputs
Function Di: Symmetrical Flashing Relay (Starting Pulse On)

Description
On energisation of power supply, output(s) R starts at output(s) R close(s) for timing duration T then revert(s) to its/their initial state for the same timing duration T. This cycle is repeated indefinitely until power supply removal. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

Function: 2 Outputs
Function Dit: Symmetrical Flashing Relay (Starting Pulse On) & With Pause / Summation Control

Description
On energisation of power supply, output(s) R starts at output(s) R close(s) for timing duration T and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, then revert(s) to its/their initial state. The output(s) R at initial state will remain for the same timing duration T and the timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R change(s) to close state. This cycle is repeated indefinitely until power supply removal. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

\[
T = t_1 + t_2 + ... \\
T = t'_1 + t'_2 + ...
\]

Function: 2 Outputs

\[
T = t_1 + t_2 + ... \\
T = t'_1 + t'_2 + ...
\]
Function Diw: Symmetrical Flashing Relay (Starting Pulse On) & With Retrigger / Restart Control

Description
On energisation of power supply, output(s) R starts at output(s) R close(s) for timing duration T then revert(s) to its/their initial state for the same timing duration T. This cycle is repeated indefinitely until power supply removal. At any state of the output(s) R when Y1 energizes, the output(s) R will revert to its/their initial state and followed by Y1 deenergizes then restarts the same operation as described at the beginning. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

Function: 2 Outputs
Function H: Interval Relay

Description
On energisation of power supply, output(s) R close(s) and timing period T starts. At the end of the timing period T, the output(s) R revert(s) to its/their initial state. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

Function: 2 Outputs
Function Ht: Interval Relay & With Pause / Summation Control

Description
On energisation of power supply, output(s) R close(s) and timing period T starts. The timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R revert(s) to its/their initial state. Reenergization of X1 will also cause output(s) R close(s) if the time has elapsed and restart the same operation as described at the beginning. Except for RE17*, RE22R2AMU, RE22R2MMW, RE22R2MMU, RE22R2MJU, timing can be interrupted / paused each time Y1 energizes. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

\[ T = t_1 + t_2 + \ldots \]

Function: 2 Outputs

\[ T = t_1 + t_2 + \ldots \]

Function: 1 Output with Retrigger / Restart Control

\[ T = t_1 + t_2 + \ldots \]

Function: 2 Output with Retrigger / Restart Control

\[ T = t_1 + t_2 + \ldots \]
Function Hw: Interval Relay & with Retrigger / Restart Control

Description
On energisation of power supply, output(s) R close(s) and timing period T starts. At the end of the timing period T, the output(s) R revert(s) to its/their initial state. At any state of the output(s) R when Y1 energizes followed by deenergizes, the output(s) R close(s) then restarts the same operation as described at the beginning. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").

Function: 1 Output

Function: 2 Outputs
Product data sheet

Technical Description

Function W: Interval Relay with Control Signal Off

Description
After energisation of power supply and on energization of Y1 following by deenergization of Y1, the output(s) R close(s) and starts the timing T. At the end of the timing period, the output(s) R revert(s) to its/their initial state. The second output (R2) can be either timed (when set to “TIMED”) or instantaneous (when set to “INST”).

Function: 1 Output

Function: 2 Outputs
Function Wt: Interval Relay with Control Signal Off & with Pause / Summation Control

Description
After energisation of power supply and on energization of Y1 following by deenergization of Y1, the output(s) R close(s) and starts the timing T. Timing can be interrupted / paused each time X1 energizes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output(s) R revert(s) to its/their initial state. The second output (R2) can be either timed (when set to "TIMED") or instantaneous (when set to "INST").
